BIOGRAPHICAL SKETCHES

RICA BARQUEZ. She was born on November 27, 2004, in Ormoc City. She currently resides at Brgy. Dayhagan, Ormoc City. She finished her primary education at Dayhagan Elementary School and her secondary education at Valencia National High School. She completed her Senior High School at ACLC Ormoc. She is currently a 3rd Year student taking up Bachelor of Science in Business Administration major in Marketing Management at the City College of Ormoc.

CRISTINE CABEROS was born in Taguig City and currently residing at Brgy. Sabang Bao, Ormoc City. She attended her primary school at Kapt. Jose Kardones Memorial Elementary School and Sabang Bao Elementary School. Her secondary and senior high school, where her strand was General Academic, was at Rustico Capahi Sr. Memorial National High School. Currently she is enrolled at City College of Ormoc in her 3rd year, taking up a Bachelor of Science in Business Administration with a major in Marketing Management.

ANA MARIE SIOC is a 21-year-old individual who was born on September 11, 2004, in Ormoc City. She is currently residing in Brgy. Patag, Sitio Salvacion, Ormoc City. She completed her elementary education at Patag Elementary School and her secondary education at New Ormoc City National High School. She pursued her Senior High School education at St. Aloysius Institute of Technology, Inc., where she took the Humanities and Social Sciences (HUMSS) strand. At present, she is a third-year college

student at the City College of Ormoc, taking up a Bachelor of Science in Business Administration, majoring in Marketing Management.

RENIE ROSE MORQUIANOS. She was born on December 31, 2002 in Ormoc City. She currently resides at Ipil Ormoc City. She finished her primary education at Ipil Central School and Secondary education at Villaba National Comprehensive High School. She is currently a third year student taking up Bachelor of Science In Business Administration Major In Marketing Management at the City College Of Ormoc.

FERNANDO P. LARIDE Jr. is the youngest among his siblings. He was born on October 3, 2000, in Ormoc City and is currently residing in Barangay Salvacion. He completed his primary education at Barangay Salvacion, Ormoc City, his secondary education at Ormoc City National High School, and his senior high school at STI College of Ormoc. At present, he is pursuing a Bachelor of Science in Business Administration, major in Marketing Management, at the City College of Ormoc.

ACKNOWLEDGEMENT

First and foremost, the researcher offers their deepest gratitude to God, the Almighty, for His divine guidance, strength, wisdom, and abundant blessings, throughout the entire research process. His presence provided the perseverance, clarity, and determination needed to successfully complete this study.

The researchers proudly acknowledge the City College of Ormoc, the institution that has provided them with quality education, academic resources, and an environment conducive to learning and research. The institution's commitment to academic excellence has played a vital role in shaping the researcher's knowledge, skills, and values necessary for the completion of the study.

The researcher would like to express their sincere and profound appreciation to their research instructor, Mr. Jemar A. Siona, for his continuous encouragement, insightful suggestions, and valuable assistance. His dedication to guiding the researchers throughout the process significantly contributed to the development and successful completion of this study.

The researcher also extends their heartfelt gratitude to their research adviser, Mr. Aga C. Galabo, for his unwavering support, patience, and expert guidance. His constructive feedback, professional insights, and commitment to excellence greatly enhanced the quality, depth, and direction of this research work.

The researchers are deeply indebted to all the participants who generously shared their time, experiences and perspectives. Their willingness to participate and provide

honest and meaningful responses served as the foundation of this study, making its completion possible.

In addition, the researchers wish to acknowledge their families for their unconditional love, moral support, and understanding throughout the conduct of this research. Their encouragement served as a constant source of motivation, especially during challenging times.

Lastly, the researcher extends their appreciation to their friends and peers for their support, cooperation, and encouragement, which contributed positively to the completion of this academic endeavor.

To everyone who, in one way or another, contributed to the success of this research, the researchers express their sincere and heartfelt gratitude.

Abstract

This study explores the consumer buying perception of pineapple wine in Ormoc City, focusing on the factors that influence acceptance, perceived benefits and drawbacks, cultural influences, and motivations for purchase or avoidance. Specifically, it seeks to determine how consumers evaluate pineapple wine in terms of taste, quality, price, and overall appeal within the local context. A qualitative descriptive research design was employed, utilizing semi-structured interviews with fifteen (15) participants composed of local residents and tourists aged 23–59 years old who have prior experience in wine consumption. Data were analyzed using thematic analysis to identify recurring patterns.

Findings revealed that consumer perception is largely shaped by sensory expectations, particularly the anticipated sweet-sour taste, tropical aroma, and golden color associated with Ormoc's Queen pineapple. The product's novelty and association with local identity enhance its appeal, especially as a specialty or pasalubong item. However, concerns regarding inconsistent quality, excessive sweetness, and price sensitivity were identified as major drawbacks. Cultural factors also play a significant role, as pineapple wine is perceived as suitable for formal occasions but faces resistance in casual drinking settings dominated by traditional beverages. The study concludes that pineapple wine has strong market potential as a premium, locally branded product. However, its success depends on quality standardization, competitive pricing, professional packaging, and promotional strategies such as product sampling to encourage trial and acceptance.

CHAPTER 1

INTRODUCTION

Background of the Study

Wine is a well-known and ancient alcoholic beverage with an appealing flavor and potential health benefits. Its flavor and aroma results from many interactions between various chemical compounds and sensory receptors (Styger et al., 2019). Traditionally, wine is produced from grapes however, advancement in technology have allowed the use of other fruits, leading to the development of fruit wines. These innovations respond to the growing global demand for diverse and alternative alcoholic beverages (Saranraj et al., 2017)

Pineapple wine is a fermented alcoholic beverage produced from the juice of pineapple, often through natural fermentation or controlled processes. Originating in tropical regions like the Philippines, Hawaii, and parts of Southeast Asia, it has gained popularity as a niche product in global markets. (Adepoju, 2017)

Unlike traditional grape wines, pineapple wine offers a sweet, fruity profile with notes of tropical acidity and subtle effervescence, making it appealing to consumers seeking alternatives to conventional wines. Its production is relatively simple, using fresh or canned pineapple juice, yeast, and sometimes added sugars, resulting in an alcohol content typically ranging from 10-15% ABV. (Kumar, A., et al. (2020).

The Philippines is recognized as one of the worlds key pineapple producers securing its title both as the world's second-largest producer and exporter of pineapple

with more than 2.9 million metric tons (mt) of pineapple. (De Torre, 2024). Ormoc City, agriculture plays a significant role in the local economy. According to the City Government of Ormoc (n.d.), the city is recognized for its fertile lands and agricultural productivity, particularly in pineapple cultivation. Ormoc is known for producing the “Queen” pineapple variety, locally valued for its exceptional sweetness, rich aroma, and high quality. The distinct characteristics of Queen pineapple make it a promising raw material for wine production, as its natural sugar content and flavor profile can enhance the sensory qualities of the final product.

In Ormoc City, where consumers are exposed to both commercial alcoholic beverages and locally produced products, understanding buying preferences is essential for market development (Torres & Ibáñez, 2020). Factors such as taste, alcohol content, price perception, packaging, and brand awareness may influence consumers` purchasing decisions, especially for relatively unfamiliar products like pineapple wine.

This study aims to fill this gap by analyzing the consumer perception towards pineapple wine in Ormoc City. By addressing the limited research on consumer perception and purchasing behavior towards pineapple wine in local settings such as Ormoc City.

Statement of the Problem

This study aims to explore the factors that shape consumer perception toward pineapple wine in Ormoc City. It seeks to understand how consumers evaluate pineapple wine in terms of its perceived benefits and drawbacks, including aspects such as taste,

quality and affordability. The study examines how cultural background and local traditions

influence the acceptance and consumption of pineapple wine among residents. It also investigates the motivations that encourage consumers to try pineapple wine as well as the reasons that may lead them to avoid it. The study intends to provide a comprehensive understanding of consumer attitudes and behaviors toward pineapple wine Ormoc City.

Specifically, the study seeks to answer the following questions:

1. What factors shape consumers` perception towards pineapple in Ormoc City?
2. What do consumers see as the benefits or drawbacks of choosing pineapple wine in Ormoc City?
3. How does cultural background influence pineapple wine consumption in Ormoc City?
4. What motivate consumers to try or avoid pineapple wine in Ormoc City?

Significance of the Study

This study is significant as it will provide valuable insights into the consumer perception towards pineapple wine in Ormoc City. The findings of this research are expected to benefit the following:

For Pineapple Growers, this study may encourage pineapple growers to explore additional market opportunities by understanding the potential demand for pineapple wine. This could increase income opportunities and strengthen the local agricultural sector in Ormoc City.

For Wine Producer, this finding may guide producers in product quality, developing competitive pricing strategies, and creating more attractive packaging to meet market demand.

For Wine Retailers, this study may create opportunities to better understand consumer preferences, purchasing behavior, and factors influencing wine selection, enabling them to tailor their product offerings and marketing strategies accordingly.

For Consumers, the study will help to become aware of the pineapple wine, assisting them in making informed purchasing decisions based on taste, price, and quality.

For Local Government of Ormoc City, it promotes a locally produce products, and encourages or attract tourist to experience the local pineapple wine.

For Future Researchers, this study will provide references for future studies on consumer behavior and beverage preferences, contributing to the body of knowledge on local alcoholic beverages.

Scope and Delimitation

This study focuses on exploring the consumer perception towards pineapple wine in Ormoc City. It aims to identify the factors that shape the consumer perception, including personal preference, product characteristics, price availability and social influences. The study also examines the perceived benefits and drawbacks of choosing pineapple wine among consumers in the area and the cultural background influences pineapple wine consumption and determines the motivations that encourage consumers to

try or avoid the product. The participants are locals and tourist 23-59 years old and must experience purchasing and consuming wine.

The study is delimited to selected local consumers and tourists in Ormoc City focuses exclusively on pineapple wine, excluding other fruit wines and alcoholic beverages. The study considers consumer perspective only and does not cover producer, distributor, or retail viewpoints, nor production and distribution processes.

Definition of Terms

Alcohol Content- The amount of ethanol present in the pineapple wine, expressed as a percentage, indicating its strength or potency.

Culture- Refers to the beliefs, traditions, and social practices of consumer in Ormoc City that may influence their attitudes and acceptance of pineapple wine.

Drawbacks- The possible disadvantages, limitations, or negative factors associated with pineapple wine, such as taste preference, availability, price, or consumer concerns that may affect purchasing decisions.

Fermentation- The natural process used in producing pineapple wine, where sugars from pineapple are converted into alcohol through the action of yeast.

Taste Profile- The combination of flavors, aroma, and overall sensory experience of the pineapple wine, including sweetness, acidity, and aftertaste.

Packaging- The physical presentation and design of the pineapple wine product, including bottle, label, and branding, which may affect consumer appeal.

Perception- Refers to the consumers opinions, attitudes, beliefs, and overall evaluation of pineapple wine based on their experiences, knowledge and preferences.

Pineapple Wine- A fermented alcoholic beverage available in Ormoc City known for its unique sweet and tangy flavor.

Purchase- The act of buying or acquiring pineapple wine, reflecting consumer behavior and decision-making.

CHAPTER II

REVIEW OF LITERATURE

This chapter contains the review of related literature and studies that serves as a guide in order to obtain necessary data and information about the present study.

Perception and Acceptability of Fruit Wines

According to the study by Merlino et al. (2021) explored how young adults (18-35 years old) perceive and evaluate fruit wine products specially an innovative wine produced by co-fermentation of grape must kiwi juice, consumer perception varies depending on prior experience with fruits wines (neophiles) evaluate the product based on intrinsic qualities such as the taste, aroma, sweetness, and overall balance, relying on their past experience to form judgements. To those who had never tried fruit wines (new entries) formed expectations mainly from the type of fruit use, expecting the flavor and scent to strongly reflect the fruit ingredient.

Acceptability was generally positive among both groups, as many respondents showed willingness to try innovative fruit wines. Long-term acceptance depended on whether the actual sensory experience matched their expectation. Extrinsic factors such as packaging decisions, especially for new consumers. The study suggest that fruit wines have promising market potential among young adults, but their continued acceptance depends on effective expectation management, appealing presentation, and satisfying sensory quality.

Consumer Buying Behavior Towards Alcoholic Beverages Including Wine

Studies indicate that wine consumers evaluate based on sensory qualities such as flavor and aroma, which strongly influence acceptance and repeat purchase behavior. (Lockshin & Corsi, 2022). Consumers often rely on their perception of taste quality when selecting wine, particularly when they have prior experience of familiarity with the product. In addition to sensory attributes, packaging and label information also affects consumer decision-making. Escandon-Barbosa and Rialp-Criado (2018), found that wine label content, including product information and visual presentation influences customer attention and purchase intention. Price perception is another significant determinant of purchasing behavior. Research shows that consumers associate price with perceived quality, especially in alcoholic beverages (Lockshin & Corsi, 2022).

Fermentation of Fruit Wine and its Quality Analysis

Fermentation is a traditional biotechnology process that has long been used to produce alcoholic beverages such as wine, beer, and spirits. While fermentation technologies have ancient origins, their application in producing fruit wines-on-grape based wines-is gaining research interest due to both nutritional and economic benefits (Saranraj et al., 2017). In 19th century Louis Pasteur linking yeast activity to alcoholic fermentation, alcoholic fermentation involves microorganism primarily *Saccharomyces cerevisiae* metabolizing sugars to produce ethanol and other by products. Yeasts play a critical role in determining both the efficiency of fermentation and the sensory characteristics of the resulting wine. The chemistry of fermentation affects volatile compounds that influence aroma, taste and overall wine quality.

Fermentation of non-grape wine, traditionally wine produce has historically focused on grapes due to their ideal natural sugar composition and acidity balance. Research indicates that a wide variety of fruits (e.g., pineapple, apple, plum, banana) can also be successfully fermented into wine using controlled fermentation techniques. These alternative substrates often required added sugar or designed fermentation conditions to achieve comparable alcohol levels and sensory (Saranraj et al.,2017).

Pineapple contains fermentable sugars such as sucrose, glucose, and fructose which serve as substrates for yeast metabolism during alcoholic fermentation (Chaudhary et al.,2019). During fermentation, sugar is converted into ethanol and carbon dioxide, while secondary metabolites such as esters and organic acids contribute to aroma and flavor development. Ningli et al. (2017) reported that pineapple wine fermentation resulted in a product containing approximately 10.2% alcohol volume, 2.29 g/l total acid, 5.4 brix soluble solid, and a pH of 3.52. It identifies 68 aroma compounds with significantly contribute to the fruity aroma of pineapple wine. Secondary fermentation can further improve wine quality. (Prakitchsiwattana et al., 2017) evaluated malolactic fermentation using *Oenococcus oeni* strains to reduce malic acid content and enhance sensory quality. The results showed that co-fermentation with lactic acid bacteria decreased malic acid levels while increasing lactic acid formation, improving overall taste and acceptability. The final product contained approximately 10% alcohol volume with improved pH and titratable balance

The review by Chaudhary et al. (2019) highlighted that pineapple processing includes wine production, aims to convert perishable fruit into stable, value-added

product with extended shelf life. Pineapple wine represents a promising processed product due to its nutritional content, flavor characteristics, and growing market demand for fruit-based alcoholic beverages.

Quality analysis of fermented fruit wine centers on understanding how fermentation variables contribute to the final product's physical and chemical properties. The composition of by-products such as esters, acids, and aldehydes significantly impact flavor and stability while analytical techniques (Saranraj et al., 2017). Assessing wine quality encompasses both objective measures (e.g., alcohol concentration, residual sugar levels) and consumer sensory evaluations. The interplay between fermentation conditions and fruit substrate chemistry leads to variability in wine quality, highlighting the need for optimized processing methods to ensure consistent product standards that meet consumer and regulatory expectations.

Traditional Drinking Culture of Filipinos

Alcohol consumption in the Philippines is deeply embedded in cultural traditions and social practices that date back to the pre-colonial period. Traditional Filipino alcoholic beverages such as *tapuy* (rice wine), *basi* (sugarcane wine), *tuba* (palm wine), and *lambanog* are not only consumed for leisure but also serve as cultural symbols used in rituals, celebration, and social bonding, emphasizing that drinking is a shared culture experience rather than an individual activity (Springer, 2023).

Historically, early Filipinos practiced communal drinking as part of religious ceremonies and important life events such as weddings and harvest celebrations.

Indigenous fermentation methods were used to produce local alcoholic beverages, which were shared among community members to symbolized unity and cooperation. This long-standing tradition highlights the importance of alcohol in foretasting social cohesion and maintaining cultural identity (Kabawaran 2018).

A distinctive feature of Filipino drinking culture is the practice of *tagay*, a communal drinking system where a single glass is shared among participants. According to Philippine Social Science Journal, *tagay* involves specific roles such as the *tanggero*, who controls the pouring of drinks, and follows informal rules that promote equality and participation within the group. This practice is commonly observed during gatherings and celebrations, reinforcing interpersonal relationship and a sense of belongings (“The social dynamics of Filipino drinking”, 2020).

Drinking session, commonly referred to as “inuman”, function as social spaces where individuals engage in storytelling, relaxation, and bonding. These gatherings reflect the Filipino value of *pakikisama*, or maintaining harmonious relationship with others. Sharing drinks symbolizes trust and acceptance, making alcohol consumption an important aspect of Filipino social interaction (“The essence of Pinoy drinking culture”, 2022).

The traditions of drinking remain significant, especially during festivals and community events. Studies indicate that alcohol consumption increases during celebrations, demonstrating its continued cultural relevance. Despite modernization, traditional values associated with drinking such as camaraderie, hospitality, and shared

experience continue to influence consumers behavior and preference (Bulleted, 2023) These cultural practices may also affect the acceptance of alternative alcoholic beverages, such as pineapple wine, particularly among local consumers and tourists.

Consumer Perception of Wine Products and Wine Tourism

The study revealed that consumers have access to a wide range of information sources regarding wine products, including media (television, press), the internet, store shelves, specialized stores, festivals, exhibitions, and recommendations from friends or colleagues. This accessibility allows consumers to easily obtain the information they need when choosing wine products. In terms of purchasing behavior, most consumers prefer to buy wine from specialized stores and markets. The findings also showed that several factors influence consumers decisions, such as patriotism, family, traditions, recently developed habits, suggestions from others, curiosity, promotional activities, food safety, and products characteristics like appearance, color, smell, and taste. Perceived health benefits when consumed in small quantities when consumed in small quantities were considered important reasons for wine consumption (Gutan et.,al 2023).

The study identified key criteria used by consumers in selecting wine products. These include the region or area of origin, the producer's logo, protected geographical making inscription about the product, familiarity with the products, type of dishes with which it is consumed, quality of the product (color, taste, smell, interior and/or exterior appearance), attractiveness of the packaging, price of the products. In terms of consumptions patterns, respondents reported wine is most commonly consumed during holidays (religious, national, and family events) and social gatherings with friends and

loved ones. The study results that wine tourism plays a significant role in consumer engagement. About 75% of there respondents had visited a winery, reflecting a strong interest in wine-related experiences, while 25% had not. Among those who visited, the majority (68.2%) organized their visits independently, while others relied on tour operators either partially (17%) or fully (14.8%) the findings highlight that both products attribute the intrinsic and extrinsic factors significantly influence consumer perception and behavior towards wine (Agriculture MDPI, 2023).

Conceptual / Theoretical Framework

Product Attributes Theory

Product attributes theory was developed by Kelvin Lancaster (1966) posits that consumers do not derive utility from goods themselves, but from the bundles of characteristics (attributes) those goods possess. The study of (Antonides & Hovestadt, 2021) shows that product attributes including taste, packaging, alcohol content, and price significantly affects consumer satisfaction and purchase decisions. According to consumer behavior literature, product attributes are classified into intrinsic attributes and extrinsic attributes (Kotler & Keller, 2016). Intrinsic attributes refer to the physical and functional characteristics of a product. In context of pineapple wine, it includes the taste, aroma, alcohol content and overall sensory quality. Extrinsic attributes on the other hand, are external product-related factor that influence consumer perception which includes the price, packaging, brand image and label information. In relation to this study on pineapple wine in Ormoc City, this theory helps explain how factors and cultural context influence purchasing decision.

Theory of Planned Behavior (TPB)

Theory of Planned Behavior by Icek Ajzen (1991), assert that consumer behavior is guided by behavioral intentions, which are determined by three factors; attitude towards the behavior, subjective norms, and perceived behavioral control. Attitude towards the behavior refers to the consumer's positive or negative evaluation of purchasing a product. Subjective norms can be considered social pressures from the family, friends, or society that influence purchasing decisions. Perceived behavioral control reflects the consumer perception of the ease or difficulty in performing the behavior, such as affordability or product availability. TPB provides a framework for understanding how consumers attitudes, social influences, and perceived control affect their intention to purchase a product (Ajzen, 1991). Theory of Planned Behavior provides a strong theoretical foundation for analyzing consumer buying preferences of pineapple wine in Ormoc City.

EKB Model of Consumer Behavior

The Engel-Kollat-Blackwell Model (EKB), originally developed by Engel, Kollat, and Blackwell in 1968, provides a detailed explanation of the stage's consumer undergo in making purchasing decisions. The model is "structured around a seven-point decisions process: need recognition followed by a search of information both internally and externally, the evaluation of alternatives, purchase, post-purchase reflection, and finally, divestment" (Solomon et al., 2012).

In this model, consumer first recognize a need or problem that prompts them to seek information from internal source (such as prior experience) and external source (such as advertisement or recommendation). They then evaluate available alternatives based on criteria such as price, quality, brand image, and personal preference before making a purchase decision. After the purchase, consumer assess their satisfaction or dissatisfaction, which influences repeat purchases and brand loyalty. EKB Model provides a framework for understanding how consumers in Ormoc City progress from recognizing a desire for pineapple wine to decide to buy or reject it.

The conceptual framework of the study identifies intrinsic factors, extrinsic factors, and fermentation quality as the independent variables influencing consumer evaluation of pineapple wine. Intrinsic factors include taste, aroma, sweetness, alcohol content, and acidity, which directly affect sensory experience and satisfaction. Extrinsic factors such as packaging design, label information, price perception, and fruit type shape consumer expectations prior to consumption. Meanwhile, fermentation quality, comprising alcohol volume, aroma compounds, and chemical composition contributes to the overall product quality and stability, thereby affecting consumer acceptance and evaluation. Consumer perception serves as the moderating variable that connects product attributes to behavioral outcomes through prior experience and expectation formation. Positive perceptions enhance product acceptability, purchase intention, willingness to try, and repeat purchase behavior, which represent the dependent variables of the study. These outcomes reflect consumers' final decision-making stage, consistent with consumer

behavior theories, where product evaluation leads to purchasing decisions and potential long-term market acceptance.

Figure 1 The conceptual framework

The conceptual framework of this study is anchored on Product Attributes Theory, which explains based on a combination of intrinsic and extrinsic attributes. These

attributes significantly shape consumer perception, which ultimately influences purchasing decisions. Intrinsic attributes refer to the internal and sensory characteristics of pineapple wine, particularly its quality in terms of color, taste, and smell. These attributes directly influence the consumer's actual experience during consumption. According to Gutan et al. (2023), product characteristics such as appearance, aroma, and taste are among the primary criteria consumers use when evaluating wine products.

Extrinsic attributes include external factors that influence consumer expectations and decision-making even before consumption. In this study, these consist of packaging attractiveness, price, familiarity, societal norms, geographical indication, region or area of origin, and the type of dishes paired with the wine. The study of Gutan et al. (2023) identified that factors such as product origin, label information, packaging, and price significantly affect consumer choices. The framework identifies consumer perception as the central variable that integrates both intrinsic and extrinsic attributes.

Consumer perception reflects how individuals interpret, evaluate, and form judgments about pineapple wine based on their experiences, expectations, and available information. As supported by the literature on wine products and wine tourism, consumers rely on multiple sources such as media, personal experience, and social influence when forming perceptions and making purchase decisions (Gutan et al., 2023). Overall, the framework suggests that intrinsic attributes and extrinsic attributes significantly determine consumer perception toward pineapple wine.

CHAPTER III

METHODOLOGY

This chapter present various methodologies that were used in gathering data and analysis which are relevant to the research. It deals with the research design, respondents of the study, sampling technique, research instruments, data gathering procedure, analysis that will be used, research locale and ethical consideration.

Research Design

This study will employ a qualitative descriptive research design to explore and understand the consumer perceptions of pineapple wine in Ormoc City. This design is appropriate because it focuses on understanding participants 'experiences, opinions, and perspectives regarding perceptions, benefits and drawbacks, cultural influences and motivations related to pineapple wine. Through in-depth semi-structured interviews, the participants can freely express their views, allowing the researchers to gather detailed and meaningful insights. The qualitative descriptive approach is suitable since the study aims to describe and interpret consumer perceptions in depth rather than measure them statistically.

Research Participants

The participants of this study will be 8 local and 7 tourists consist of 15 participants Ormoc City. The research participants of this study must meet specific criteria to ensure the relevance and reliability of the data collected. Participants should be professionals belongs to the white-collar workforce, such as individuals employed in corporate, administrative, managerial, or office-based role. They must be between the

ages of 23-59 years old. Participants should be wine drinkers, meaning they are prior experience in purchasing and/or consuming wine. All participants must be willing to participate voluntarily and provide informed consent before taking part in the study.

Sampling Technique

A purposive sampling technique will be used to ensure that participants are directly relevant to the objectives of the study. Purposive sampling ensures that the selected individuals have knowledge or experience relevant to pineapple wine consumption.

Research Instrument

Data will be gathered primarily through semi-structured interviews, allowing participants to share the factors influencing their purchasing decisions and when they typically consume wine. The semi-structured format allows flexibility in asking follow-up questions to gain deeper insights into the responses.

Data Gathering Procedure

The data collected through interview and will be conducted in person with selected participants. Each interview will last approximately 20-25 minutes. With the permission of the participants, the interviews will be audio-recorded to ensure accurate data collection. The researchers will take notes during the interview process. All gathered information will be handled with strict confidentiality.

Data Analysis

The collected qualitative data will be analyzed using thematic analysis following the six-step process of Braun and Clarke (2006): (1) familiarization with data, (2) generating initial codes, (3) searching for themes, (4) reviewing themes, (5) defining and naming themes, and (6) producing the report. This method will allow the researcher to identify recurring patterns, categorize emerging themes, and interpret the significance of participants in relation to the objectives of the study

Research Locale

The study will be conducted within Ormoc City Downtown, this location was chosen due to it has a high volume of both local residents and tourists who visits shop, markets, restaurants, and other establishments daily. Ormoc City Downtown is suitable for exploring the buying perception of pineapple wine since it allows the researchers to gather data from local and tourist who represent the target market of pineapple wine of Ormoc City.

Ethical Consideration

This study will strictly adhere to ethical standards in research. Participants will be provided with an informed consent form, clearly stating the purpose of the study and their voluntary participation. The researchers will make sure that participants can withdraw their participation from the study, since participation is not compulsory.

In accordance with the Data Privacy Act of 2012, confidentiality of information will be strictly maintained throughout the data collection process. The identifies and

personal information of the participants will not be disclosed. The data will be collected through surveys will be securely stored and will be accessible exclusively to the researchers and will be used solely for research purposes.

The study will also ensure that any form of harm will not occur during the data collection process. Questionnaires from the survey are crafted with appropriate use of words to be respectful and relevant only to the scope of the study, respecting the rights and dignity of all participants involved in the study.

Lastly, all sources are from credible sources to ensure reliability of results. Proper acknowledgement of all secondary sources is ensured through accurate citation and referencing following the APA style to avoid plagiarism and promote academic integrity.

CHAPTER IV

RESULTS AND DISCUSSION

This chapter presents the findings of the study based on the semi-structured interviews conducted with eight local residents and seven tourists in Ormoc City. The data were analyzed through thematic analysis to identify recurring patterns regarding consumer buying perceptions of pineapple wine.

Profile of the Respondents

The study successfully interviewed a total of 15 participants. To maintain the specific criteria established in the methodology, all participants belong to the white-collar workforce and are wine drinkers within the age bracket of 23–59 years old.

Table 1. Distribution of Respondents

Table 1. Distribution of Respondents

Category	Frequency	Percentage
Local Residents	8	53.3%
Tourists	7	46.7%
Total	15	100%

Data Presentation and Thematic Analysis

The analysis of participant responses revealed a complex interplay between local pride and market skepticism. By employing open coding, raw data were categorized into four major themes that define the consumer buying perception landscape.

Table 1. Factors Shaping Perception of Pineapple Wine

Major Theme	Sub-Themes/Codes	Narrative Evidence (Raw Responses)
I. Sensory-Cognitive Perception	Expectation Alignment:	"I imagine a sweet-sour taste, a strong pineapple scent, a clear yellow color, and a smooth kick of alcohol." (Local 4) "Sweet, golden, tropical, and refreshing wine that feels somewhat experimental." (Tourist 5) "Yellow, high alcohol level, sour and sweet with a fruity tropical scent." (Tourist 2)
	Perceived Product Novelty (Experimental, Unique, Rare)	"It is rare... and a quality product." (Tourist 1) "Sweet, golden, tropical, and refreshing wine that feels somewhat experimental." (Tourist 5) "It's a new product... not familiar with the product." (Local 2)
	Comparative Framing (Against Known Wines/Drinks)	"Same as the original wines... sometimes good sometimes not." (Local 2) "Too sweet that it only tastes like a regular pineapple juice." (Tourist 6) "Same as the original wines... sometimes good sometimes not." (Local 2)

Table 2 Factors Shaping Perception of Pineapple Wine

The first major theme focuses on how respondents perceive pineapple wine in terms of its sensory attributes and mental expectations. Most respondents demonstrated expectation alignment, describing pineapple wine as having a sweet-sour taste, tropical aroma, and yellow or golden color. These perceptions are strongly influenced by the

natural characteristics of pineapple itself. These findings indicate that consumers already have a clear mental image of the product, which may help in product positioning and marketing. However, pineapple wine is also perceived as a novel and experimental product. Many respondents described it as “rare,” “unique,” and “somewhat experimental,” reflecting both curiosity and uncertainty. For example, a tourist respondent noted that it is *“a sweet, golden, tropical, and refreshing wine that feels somewhat experimental”* (Tourist 5).

This suggests that while novelty can attract attention, it may also create hesitation due to unfamiliarity. Additionally, respondents often compare pineapple wine with known beverages such as grape wine, coconut wine (tuba), or even fruit juice. This comparison highlights the importance of clearly differentiating pineapple wine from non-alcoholic beverages and traditional wines. Consumer perception in Ormoc City is heavily pre-conditioned by the global reputation of the “Queen Pineapple”. Participants do not view the wine as a blank slate; rather, they project the fruit’s known characteristics—its intense sweetness and golden color—onto the beverage. This creates a “Cognitive sensory benchmark” where any product that appears cloudy or tastes overly acidic may be rejected for not being “authentic” to the Ormoc brand. The findings suggest that consumers rely heavily on sensory expectations and prior knowledge when evaluating new products. According to consumer behavior theory, perception is influenced by existing schemas, which explains why respondents associate pineapple wine with the fruit’s natural characteristics.

Table 2. Perceived Benefits and Drawbacks of Pineapple Wine

Major Theme	Sub-Themes/Codes	Narrative Evidence (Raw Responses)
II. Evaluative Value Assessment	Economic Patriotism: Supporting local farmers, "Tatak Ormoc" brand.	"It supports our local farmers, shows Ormoc pride, and offers a unique flavor you can't get elsewhere." (Local 4) "It will help... local farmers... we have a lot of pineapple plantation here." (Local 2) "Support local products... opportunity to support local community." (Tourist 3)
	Perceived Value & Profitability	"I would consider it profitable since it is a rare and quality product." (Tourist 1) "It looks like an enjoyable beverage... good value compared to imported options." (Tourist 3)
	Standardization & Quality Concerns	"Doubt about the quality because it is especially new... and not familiar with the product." (Local 2) "Uncertainty regarding the quality and taste." (Tourist 3) "Price does not match the quality." (Tourist 6)

Table 3 Perceived Benefits and Drawbacks of Pineapple Wine

The second theme examines how consumers evaluate the product in terms of value, benefits, and potential drawbacks. A dominant finding is the presence of economic patriotism or local pride. Many respondents expressed willingness to support pineapple wine because it benefits local farmers and promotes Ormoc's identity. One respondent emphasized that it *"supports our local farmers, shows Ormoc pride, and offers a unique flavor you can't get elsewhere"* (Local 4).

This indicates that the product has strong potential as a "Tatak Ormoc" brand, appealing to both locals and tourists. In terms of perceived value, several respondents believe pineapple wine has profit potential, particularly as a niche and tourism-oriented product. However, despite these positive perceptions, there are significant concerns regarding quality and standardization. Many respondents expressed doubts about consistency, safety, and production processes. For instance, one local respondent stated, *"Doubt about the quality because it is especially new"* (Local 2), while another mentioned uncertainty about whether the product's quality matches its price. These concerns highlight the need for quality assurance, certifications, and clear product information to build consumer trust.

The discussion reveals a tension between emotional support and functional skepticism. While the "Tatak Ormoc" (Made in Ormoc) sentiment drives a strong desire to support local farmers and the agricultural economy, there is a pervasive fear regarding the lack of professional distillery standards. Participants expressed concern that the wine

might be inconsistent in alcohol volume or shelf-life, highlighting that "local pride" alone is insufficient to sustain a business without technical excellence.

Table 3. Socio-Cultural Influences of Pineapple Wine

Major Theme	Sub-Themes/Codes	Narrative Evidence (Raw Responses)
III. Socio-Cultural Integration	Occasionality: Fiestas, weddings, "pasalubong" culture.	"It's perfect for fiestas and birthdays because it feels more special than regular drinks." (Local 4) "Perfect for sharing... during fiestas, birthdays, or gatherings." (Tourist 3) "Maybe in family-oriented occasions... rarely in barkada trips." (Tourist 1)
	Cultural Compatibility (Tagay System)	"It can complement 'tagay' sessions... but some prefer traditional choices." (Tourist 5) "Not good in tagay sessions if the price is high." (Tourist 4)
	Competitive Displacement: Struggle against <i>tuba</i> and beer habits.	"Filipinos consume what's familiar... I don't think locals would consider serving it over traditional tuba." (Local 7) "We drink gin... pineapple juice as chaser." (Local 3) "Commonly red wine (tuba), gin, or beer." (Tourist 1)

Table 4 Socio-Cultural Influences of Pineapple Wine

The third theme explores how pineapple wine fits within Filipino culture and social practices. Findings reveal that pineapple wine is perceived as suitable for special occasions, such as fiestas, birthdays, and family gatherings. One respondent stated, *“It’s perfect for fiestas and birthdays because it feels more special than regular drinks”* (Local 4). Similarly, tourists noted that it adds a unique and local touch to celebrations.

Pineapple wine is seen as a potential pasalubong (souvenir) product, particularly for tourists seeking something authentic from Ormoc. This strengthens its positioning as a cultural and tourism-related product. However, in terms of everyday consumption and “tagay” drinking culture, pineapple wine faces challenges. Many respondents noted that Filipinos tend to prefer familiar and affordable drinks such as beer, gin, and tuba. One participant explained that people usually consume *“what’s familiar... like traditional tuba”*. The price also plays a role in limiting its use in casual drinking sessions. As one respondent mentioned, it may not be suitable for “tagay” if it is expensive.

The qualitative data suggests that pineapple wine is culturally categorized as a "High-Value/Special Occasion" drink. It occupies a different psychological space than tuba or commercial beer, which are associated with daily labor and casual socialization. Instead, pineapple wine is seen as an ideal pasalubong (souvenir) for tourists or a "classy" gift for weddings and fiestas. This indicates that the market entry strategy should focus on prestige and gifting rather than mass-market daily consumption.

Table 4. Motivations for Trial and Purchase

Major Theme	Sub-Themes/Codes	Narrative Responses
IV. Purchase Drivers & Barriers	Incentives: Health consciousness (L-carnitine), curiosity.	"In terms of health, Pineapple has L-carnitine that can burn cholesterol." (Tourist 1)
		"Mainly curiosity and if there are health benefits." (Tourist 6)
		"Pineapple has L-carnitine that can burn cholesterol." (Tourist 1)
	Price Sensitivity (Affordability Threshold)	"If it's too pricey then I will not consider buying." (Local 2)
		"The amount... 200–300 pesos." (Tourist 4)
	Packaging & Presentation	"The presentation must be nice for me to persuade the people to buy." (Local 3)
		"Clear and attractive packaging... makes it more inviting." (Tourist 3)
	Market Entry Strategies (Promotion & Accessibility)	"Offer free samples... set up tasting booths." (Tourist 3)
		"Solid marketing with good feedback launching." (Tourist 1)
		"Promote it well and make it affordable." (Local 4)

Table 5 Motivations for Trial and Purchase

The findings reveal that consumers' willingness to purchase pineapple wine is shaped by a combination of motivating and inhibiting factors. On the one hand, purchase drivers are largely influenced by curiosity, perceived health benefits, and support for

local products. Many respondents expressed interest in trying pineapple wine due to its novelty and uniqueness, indicating that innovation plays a significant role in attracting initial consumer attention. Some participants associated pineapple with health-related benefits, such as aiding digestion or reducing cholesterol, which further enhances product appeal. The desire to support local farmers and promote locally produced goods also emerged as a strong motivating factor, reflecting a sense of community-oriented consumption. As one respondent stated, *“Mainly curiosity and if there are health benefits”* (Tourist 6), highlighting the interplay between experiential and functional motivations.

On the other hand, several barriers were identified that may hinder actual purchase behavior. Price sensitivity was one of the most significant concerns, with most respondents indicating a preferred price range of ₱200–₱300, suggesting that affordability is a critical determinant of purchase decisions. Concerns about taste and quality were also evident, as consumers expressed uncertainty regarding the product’s flavor consistency and overall acceptability. Unfamiliarity with pineapple wine contributes to hesitation, as consumers tend to rely on prior experience when making purchasing decisions. This is supported by a respondent’s statement, *“If it’s too pricey then I will not consider buying”* (Local 2), emphasizing the importance of competitive pricing.

Packaging and marketing strategies were found to significantly influence consumer behavior. Respondents emphasized that visually appealing and professional

packaging enhances product attractiveness, particularly for gifting and tourism purposes. Effective marketing strategies, such as free tastings, social media promotion, event-based marketing, and clear product labeling, were recommended as ways to reduce uncertainty and encourage trial. As one participant noted, “*The presentation must be nice... to persuade people to buy*” (Local 3). Overall, these findings suggest that while consumers are initially drawn by curiosity and perceived benefits, their final purchase decisions are strongly influenced by price, quality assurance, and effective product presentation.

Curiosity remains the primary driver for the first purchase, but health-related attributes emerged as a surprising secondary motivator. Some participants associated the wine with the digestive benefits of pineapples and the presence of L-carnitine. Conversely, the greatest barriers are aesthetic and financial; “unprofessional” packaging makes the product look like a home experiment rather than a commercial wine, which makes consumers less willing to pay a premium price.

The "Halo Effect" of the Queen Pineapple

A significant factor in shaping consumer perception is the “Halo Effect” generated by the reputation of Ormoc’s primary agricultural product. Because the Queen Pineapple is celebrated for its distinct sweetness and low acidity, participants automatically transfer these positive attributes to the wine. This cognitive bias serves as a double-edged sword; while it creates immediate interest and a high level of “Economic Patriotism,” it also sets an incredibly high bar for sensory performance. The discussion suggests that if the wine

does not deliver a flavor profile that is recognizably "pineapple-centric," the disappointment may be more profound than it would be for a generic fruit wine.

Bridging the "Quality-Trust Gap"

The recurring theme of "Standardization Fear" points to a critical "Quality-Trust Gap" in the local market. Participants expressed that their hesitation to purchase is not a lack of interest, but a lack of confidence in the small-scale fermentation process. This skepticism is rooted in previous experiences with local beverages that lacked consistency in taste, clarity, or alcohol content. To bridge this gap, the discussion implies that the product must move beyond the "home-made" narrative and adopt the language of professional oenology. Professionalizing the production—through clear filtration and laboratory-verified alcohol percentages—is not just a technical requirement but a psychological necessity to convert skeptical observers into loyal consumers.

Market Positioning: Prestige over Price

The analysis of "Socio-Cultural Influences" reveals that pineapple wine is perceived through the lens of "aspirational consumption". Participants do not compare it to tuba or beer in terms of price-per-liter; instead, they compare it to imported wines or high-end spirits used for "shala" (classy) events. This suggests that a low-price strategy might actually be counterproductive, as it could signal low quality. The findings indicate that consumers are willing to pay a premium if the product is presented as a "Tatak Ormoc" icon. Therefore, the marketing discussion must focus on the wine's role in the

"Gifting Economy"—specifically its value as a pasalubong that represents the pride and heritage of Ormoc City.

Health as a "Rationalizing" Driver

An interesting nuance in the purchase motivations is the use of "Health Benefits" as a way for consumers to rationalize the purchase of an alcoholic beverage. By citing L-carnitine and fiber, participants are essentially creating a health-conscious narrative that justifies the "guilt" associated with alcohol consumption. This psychological driver is a powerful tool for commercialization. If producers can scientifically validate even trace amounts of these beneficial properties, it provides a unique selling proposition (USP) that distinguishes pineapple wine from virtually all other spirits available in the local market.

Synthesis and Implications

The findings validate the study's conceptual framework by confirming that buying perception is a synthesis of intrinsic sensory qualities and extrinsic cultural values. The "Novelty-Quality Gap" remains the most significant hurdle; consumers are emotionally ready to buy, but functionally cautious. The professionalization of the industry—encompassing standardized alcohol content, clear filtration, and elegant packaging—is the necessary bridge to turn local interest into a viable commercial enterprise. This analysis provides the qualitative foundation required to proceed with a formal feasibility study that addresses these specific consumer pain points.

CHAPTER V

SUMMARY, CONCLUSION AND RECOMMENDATIONS

Summary of Findings

The qualitative investigation into the consumer buying perception of pineapple wine in Ormoc City revealed several critical insights across the four primary research questions. Regarding consumer perception, the study found that participants hold a "Sensory Identity" expectation, where the wine is envisioned as having a yellowish hue, a sweet-sour balance, and a tropical aroma that mirrors the characteristics of the local Queen Pineapple. While the product is viewed as a high-value specialty, there is a notable "Novelty-Quality Gap" **where** the emotional desire to support a "Tatak Ormoc" product is tempered by functional doubts concerning production consistency and standardization. Culturally, the wine is not perceived as a daily beverage but is instead categorized for "Festive Traditions" such as fiestas, birthdays, and as a premium pasalubong or gift. Finally, while curiosity and the perceived health benefits of pineapple—specifically fiber and L-carnitine—serve as strong motivations for initial trial, high price points and unprofessional packaging remain significant deterrents to sustained purchase.

Conclusion

Based on the findings, it is concluded that there is a significant market opportunity for pineapple wine in Ormoc City, provided the "trust gap" regarding quality is bridged. The buying perception of consumers is deeply tied to the prestige of the raw

material, suggesting that the product's success relies on its ability to transition from a backyard craft to a standardized, industrial-grade beverage. Because consumers view the wine as an extension of Ormoc's identity, the product should not be positioned to compete with low-cost traditional liquors like beer or tuba; rather, it should be marketed as an authentic, high-quality experience that offers both local pride and health value. Ultimately, this research provides the essential market insights and consumer behavioral data required to move forward with a full feasibility study, ensuring that the subsequent business model aligns with the specific sensory and cultural expectations of the Ormocanon market.

Recommendations

Based on the significance of the study, the following are recommended:

For Pineapple Growers: Focus on supplying high-quality "Queen" variety rejects for processing to maximize income from non-marketable fresh fruits.

For Wine Producers: Standardize fermentation to ensure a yellowish color, low alcohol volume (6-12%), and a balanced sweetness to meet the "white-collar" preference.

For Wine Retailers: Position the product in pasalubong centers and hotels rather than general sari-sari stores to maintain its "specialty" image.

For Consumers: Support local agricultural innovation to help sustain the local farming community of Ormoc.

For Local Government: Provide infrastructure support, such as a shared distillery facility and DTI-assisted branding, to ensure FDA compliance.

For Future Researchers: Conduct a quantitative follow-up or a feasibility study to determine the exact price-point elasticity and production costs.

Action Plan for Pineapple Wine Commercialization

To bridge the gap between research finding and the commercialization of pineapple wine in Ormoc City, the following outlines a strategic roadmap. This plan focuses on four key pillars: product standardization, regulatory compliance, branding, and experiential marketing.

Phase	Strategy	Primary Objective	Timeline
I. Technical	Standardization & Lab Testing	Stabilize alcohol content and shelf-life.	Months 1-3
II. Legal	Compliance & Certification	Secure FDA and LGU permits to build consumer trust.	Months 4-8
III. Creative	Premium Branding & Packaging	Position the wine as a "classy" Ormoc souvenir.	Months 6-9
IV. Market	Experiential Launch & Distribution	Use "free taste" booths and local partnerships.	Month 10+

Table 6 Action Plan

The successful introduction of pineapple wine relies first on addressing the “trust gap,” quality inconsistency concerns, and lack of consumer confidence identified in the

research. Respondents expressed significant doubt regarding the quality, safety, and consistency of non-grape wines, which is further strengthened by their perception of the product as “home-brewed” and unstandardized. To resolve this, the Technical Phase involves collaborating with the Department of Science and Technology (DOST) to standardize the fermentation process. This directly responds to the identified issues on inconsistent taste profile, unclear alcohol content, and variability in production quality. By ensuring the wine maintains a consistent 6% to 12% alcohol volume, a stable shelf-life, and improved sensory balance, producers can gradually reduce skepticism and move away from the “home-brewed” perception that currently limits consumer trust.

This leads directly into the Legal Phase, where obtaining FDA-LTO (License to Operate) and product registration becomes the primary goal. The need for this phase is strongly connected to the respondents’ concerns regarding product safety, hygiene, and credibility, as many participants indicated hesitation due to unfamiliar production standards. Formal certification serves as a response to these barriers, as it reassures white-collar consumers that the product is safe, professionally produced, and compliant with regulatory standards, helping to close the trust gap that affects purchase intention.

Once the product is technically sound and legally compliant, the Creative Phase focuses on the physical presentation, which addresses the key pain points of unprofessional packaging, weak product image, and low perceived value for premium positioning. Respondents noted that packaging strongly influences purchasing decisions, especially since pineapple wine is perceived as a “shala” (sophisticated) drink intended

for fiestas and gift-giving. To respond to this, the packaging must avoid cheap materials and instead utilize high-quality glass bottles with cork or professional screw caps. Labels that highlight “Tatak Ormoc” and the “Queen Pineapple” heritage help strengthen identity and address the issue of weak brand familiarity. This strategy also allows producers to justify a higher price point for premium gift sets while offering smaller, more affordable bottles for local “tagay” sessions, directly responding to the identified issue of price sensitivity and affordability concerns.

The final Market Phase addresses the barrier of product unfamiliarity, limited exposure, and hesitation to try new alcoholic beverages. Since the study found that curiosity is the main motivator for trial, experiential marketing becomes essential in reducing consumer risk perception. The plan prioritizes “free taste” campaigns at high-traffic locations such as the Piña Festival, local malls, and hotels to directly address unfamiliarity and uncertainty about taste. This “try-before-you-buy” strategy helps reduce hesitation linked to lack of prior experience and fear of disappointing taste expectations. Distribution is also positioned strategically rather than widely, focusing on pasalubong centers and hotel boutiques where tourists and professionals are more likely to purchase, addressing the identified gap in proper market placement. By integrating these technical, creative, and market-driven strategies while responding to the key pain points of trust, quality inconsistency, packaging weakness, price sensitivity, and unfamiliarity, the pineapple wine project can transform from a research concept into a sustainable economic contributor for Ormoc City

Appendices

Appendix A – Survey Questionnaires

Name:

Age:

Gender:

Occupation:

A. Introductory Questions

1. Are you a local resident or tourist?
2. Do you drink alcoholic beverages? [] yes [] no
3. Have you heard of fruit wines before? What fruit wine?

B. Factors Shaping Perception

4. Before this interview, had you ever heard of pineapple wine as a type of alcoholic drink?
5. What qualities would you expect from a pineapple-based alcoholic drink?

C. Perceived Benefits and Drawbacks

6. What possible benefits or advantages do you see in choosing pineapple wine (for example unique flavor, local pride, health beliefs, price, etc.)?
5. What possible drawbacks or disadvantages do you expect (for example too sweet, not familiar, price, doubt about quality, etc.)?

7. Based on these benefits and drawbacks, how likely are you to consider pineapple wine in the future if it is sold in Ormoc?

D. Cultural Background and Tradition

8. In your family or barkada, what drinks are usually served during celebrations or “inuman”?

9. Do you think a local pineapple wine could fit into these occasions (fiesta, birthdays, reunions, “tagay” sessions)? Why or why not?

E. Motivation

10. What would motivate you to try pineapple wine for the first time?

11. What reasons might discourage you from purchasing pineapple wine?

12. If pineapple wine were launched in Ormoc, what can producers or sellers do to encourage you and others to try or buy it

Appendix B- Sample Interview Transcript***LOCAL 2***

Name: leo

Age:

Gender:

Occupation:

1. Just a local resident
2. Yes occasionally
3. I've heard I'm not sure if it's a fruit wine but grapes, a wine made of grapes and coconut
4. I didn't heard of Pineapple wine it's a new for me
5. Same as the original wines. Taste sometimes good sometimes not
6. in taste, taste like pineapple, aroma smell like pineapple in sweetness not too sweet, alcohol strength it depends on the process, color I expecting yellow
7. Let's go first for the health benefits from pineapple itself it's give a lot of health benefits because it's rich in fiber and the flavor I think it's just the same as the other wine and local pride it will help benefits not just the city but also the local farmers. As we are more advantageous because we all have a lot of Pineapple plantation here in our city. Then the price it depends because if I'm not going to sugarcoat everything because this

kind of product is not cheap. Especially when there are laborers especially local farmers that need to be you know compensated properly

8. Doubt about the quality because it is especially new and people will doubt if it's good or bad and for the sweetness it depends on other people and not familiar with the product because it's new to their sight price itself this could be disadvantage maybe because it's too pricey
9. Even though there is drawback or disadvantages there still benefits the city and the local farmers because it helps the community to know, grow and to have a pineapple wine. I will consider it as well because it's from Ormoc it's new it will be a tatak Ormoc where can you find pineapple wine only in Ormoc city
10. It depends of the budget but we consider ginbilog and alfonso and during Christmas and new year there is a wine in the table
11. Yes because there is a lot of wine in the table why not pineapple wine will serve in the table
12. From the fact that is new because of curiosity
13. I think two things the taste and the price itself if the taste is bad well it will surely discourage to buy and if it's too pricey then I will not consider it buying
14. The producer must present a free taste or have free taste lunch, lunching with collaboration with the local government unit of FDA approved. It should be FDA approved to prove it's safe

The amount of money I will sacrifice 250- 300 because that is the range of other fruit wine and also a competitive price and also packaging should be presentable if the packaging “ pangit” it can ruined the image of a product, the packaging should be classy as it’s wine

TOURIST 3

Name: Krissha Mae A. Cumpas

Age: 22 years old

Gender: Female

Occupation: Teacher

A.

1. Tourist

2. Yes

3. Yes. Sangria

4. No

5. Perfect balance of sweetness and alcohol.

6. Sweet, balance alcohol, and Sweet tangy fragrance

7. As a tourist, pineapple wine appears to be a very promising choice. It is described as having a unique tropical flavor with a perfect balance of sweetness and alcohol, and it promises a refreshing and pleasant aroma. Furthermore, it offers good value compared to imported options and presents a wonderful opportunity to support local products. It certainly looks like an enjoyable beverage that would complement the local experience very well.

8. As a tourist, I might expect a few potential drawbacks. Since I am not very familiar with this type of wine, there could be some uncertainty regarding the quality and taste. I might also worry that it could be too sweet or too strong, or that the price might not match what I expect for the product. Additionally, being an unfamiliar drink, it could feel less appealing compared to wines I already know and trust.

9. Considering the unique tropical appeal and the chance to support local products, I would be quite likely to try pineapple wine in the future. While I have some concerns about the taste and quality, the overall experience of trying something new and authentic from Ormoc makes it very appealing. I would definitely consider purchasing it, especially as a souvenir or to enjoy during my visit.

10. In my circle, we usually serve common alcoholic beverages like beer, brandy, or imported wines, as well as soft drinks and juices. These are the drinks we are most familiar with and are easily available back home.

11. Yes, I believe it could fit very well. It has a unique tropical flavor that is refreshing and enjoyable, which would be perfect for sharing and toasting during fiestas, birthdays, or gatherings. It also adds a special local touch to the celebration, making the occasion feel more authentic and memorable. Additionally, since it is fruit-based, it might appeal to many people and be easy to drink even during long “tagay” sessions.

12. I would be motivated mainly by curiosity and the desire to experience something new. The idea of tasting a unique local product made from fresh pineapple is very appealing. Also, knowing that it supports the local community and wanting to bring home a special souvenir would definitely encourage me to try it.

13. My main concerns would be uncertainty about the quality and taste. Since I haven’t tried it before, I might worry that it is too sweet, too strong, or doesn’t taste natural. Doubts about the standard of production and whether the price is reasonable for the product could also hold me back.

14. They could offer free samples so visitors can taste it first without committing to buy. It would be great if they set up tasting booths in malls, big events, or carnivals where many people gather. Additionally, using clear and attractive packaging, providing information about how it is made, and promoting it as a specialty product of Ormoc would make it much more inviting for tourists like me.

Appendix C – Permit to Conduct

OFFICE OF RESEARCH AND
EXTENSION

PERMIT TO CONDUCT RESEARCH

This is to certify that the students whose names appear below are officially granted permission to conduct their research study entitled:

Exploring the Consumer Perception Towards Pineapple Wine in Ormoc City at Ormoc City Downtown.

The said research is a partial fulfillment of the requirements in the course **Marketing Research** under the supervision of **Mr. Jemar Siona**, Research Instructor, and the guidance of **Mr. Aga C. Galabo**, Research Adviser, at the City College of Ormoc.

This permit is issued upon the students' request for the purpose of data gathering, interviews, and other related activities necessary for the completion of their study.

Issued this 19th day of March, 2025 at the City College of Ormoc.

Researchers:

1. Rica M. Barquez
2. Cristine C. Caberos
3. Fernando P. Laride Jr.
4. Renie Rose U. Morquianos
5. Ana Marie C. Sioc

Approved by:

With Guidance of:

JEMAR SIONA
Research Instructor

AGA C. GALABO, IE, MBA
Research Adviser

Appendix D– Thematic Coding Sample

Major Theme	Sub-Themes/Codes	Narrative Evidence (Raw Responses)
I. Sensory-Cognitive Perception	Expectation Alignment:	"I imagine a sweet-sour taste, a strong pineapple scent, a clear yellow color, and a smooth kick of alcohol." (Local 4) "Sweet, golden, tropical, and refreshing wine that feels somewhat experimental." (Tourist 5) "Yellow, high alcohol level, sour and sweet with a fruity tropical scent." (Tourist 2)
	Perceived Product Novelty (Experimental, Unique, Rare)	"It is rare... and a quality product." (Tourist 1) "Sweet, golden, tropical, and refreshing wine that feels somewhat experimental." (Tourist 5) "It's a new product... not familiar with the product." (Local 2)
	Comparative Framing (Against Known Wines/Drinks)	"Same as the original wines... sometimes good sometimes not." (Local 2) "Too sweet that it only tastes like a regular pineapple juice." (Tourist 6) "Same as the original wines... sometimes good sometimes not." (Local 2)

Appendix E– Photographic Evidence
